

Broadband Over Power Line (BPL)

Docket - 03-104

I would be opposed to this as a ham radio operator and because of emergency communications.

When Cable TV came out YOU (FCC) told us that there would be no interference with any service-have you listen to the 2 meter band lately? NO ONE DOES A THING ABOUT THIS PROBLEM not to even talk about the noise from street lights ect. And you want me to believe that you will do as well on this BPL as you have on cable TV? I hope not! you will kill the open spectrum that we use for life saving communications with this plan . This is the only area open for this.You have to have a "quiet" spectrum to hear weak signals from desperate people. You can not count on cell phones and look what happened to the NY police and Fire Fighters on 9/11 when the ONE tower came down
